

# ted alsbach suburbia

Plan, build, and develop a small town into a major metropolis. Use building tiles to add residential, commercial, civic, and industrial areas, as well as special points of interest that provide benefits and take advantage of the resources of nearby boroughs. Your goal is to have your borough thrive and end up with a greater population than any of your opponents.

- Shuffle 3 stacks of face down tiles, each stack with a letter on the back (A, B, and C). Each stack has the same number of tiles: 15 for 2 players, 18 for 3 players, and 21 for 4 players. Place unused tiles back in the box.

- Place the Stacks Board here.

- Mix the 1 More Round tile with 6 tiles from the C stack for 2 players, 9 tiles from the C stack for 3 players, 12 tiles from the C stack for 4 players, and place those tiles face down on the bottom of the C stack. Then take 4 more C tiles (from the box) and place them on the very bottom of the C stack.

## SET-UP

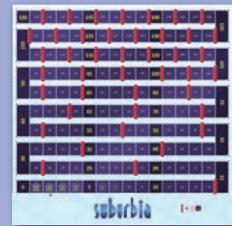

- Place the Real Estate Market here.

- Place 4 each of Heavy Factory, Community Park, and Suburb tiles face up on their three spaces here.

- Place the Supply Board here.

- Place the \$ coins here.

## CONTENTS

1 Population Board

1 Stacks Board

1 Supply Board

1 Real Estate Market

4 Borough Boards

8 Suburbs

8 Heavy Factories

8 Community Parks

1 "1 More Round"

32 A tiles

36 B tiles

32 C tiles

20 Goal tiles

- Place the A, B, and C stacks here.

- Place the top 7 tiles from the A stack face up along the bottom edge of the Real Estate Market.

- Shuffle the goals face down and place 1 random goal per player face up on their spaces here.

- Each player places a Borough Board in front of them with enough space below it for several tiles to be placed between it and the edge of the table.

- Place your Income Cylinder on the 0 Income space and your Reputation Cube on the 1 Reputation space.

- Place one Suburbs tile, one Community Park tile, and one Heavy Factory tile below your Borough Board exactly as shown here.

- Place the Population Board (which tracks Population, the "victory points" in Suburbia) on the table where everyone can see it.

- Place a Population Square from each player on the 2 Population space.

- Each player takes 2 random goal tiles from the supply, looks at both, and then keeps 1 of them (face down so the other players cannot see it). The other goal is returned to the box.

- Each player places 15 (\$million) here.

- Each Player places all 3 of his Investment Markers here.

# STARTING THE GAME

Randomly choose a player and give him the Start Player Marker.

## GAMEPLAY

On his turn, each player must perform the following four actions in order:

1. Take and place 1 tile or place 1 Investment Marker in your borough.
2. Collect or pay money (based on your Income ○).
3. Adjust Population ☰ on the Population Board (based on your Reputation ■).
4. Add a new tile to the Real Estate Market.

## TAKE AND PLACE 1 TILE OR PLACE 1 INVESTMENT MARKER

The player must either:

1. Take 1 tile and add the tile to his borough, or
2. Place 1 Investment Marker on a tile in his borough to ‘invest’ in that tile.

### Taking a tile from the Real Estate Market

When taking a tile from the Real Estate Market, the player pays the cost printed above the tile (if any) on the Real Estate Market in addition to the cost on the tile. The total combined cost of the tile is paid to the supply. The player must place the purchased tile adjacent to any of his tiles. When he does so, the player must make any adjustments as noted on the tile descriptions of the placed tile as well as any other impacted tiles (including tiles placed by other players).

The effects of a tile can be triggered after it is placed. For instance, placing a new ☱ next to an existing Community Park ☱ results in an increase of +1.

Because Income ○ and Reputation ■ can never fall below -5 or rise above 15, adjustments stop at those limits.

Dakota wants an Office Building ☱, which is a tile that costs \$9 and provides +1 upon placement and then +1 for each adjacent ☱. It is on the +\$2 space of the Real Estate Market. Dakota pays \$11 to the supply for the tile, and places it next to her Heavy Factory ☱ and her Community Park ☱, which has a +1 bonus for each adjacent ☱ or ☱ or ☱. Dakota moves her Income Cylinder up 1 space (for the immediate effect of +1), then moves her Reputation Cube up 1 space (+1 for the adjacent tile’s conditional effect: the Community Park ☱ provides +1 for the newly adjacent ☱).

### Taking a basic tile

The player may also take any available basic tile: Suburb ☱, Community Park ☱, or Heavy Factory ☱ instead of a tile from the Real Estate Market. If he does so, he pays only the cost on the tile. The player places this tile in the same manner as if he had bought it from the Real Estate Market. These tiles are limited, and may run out during a game, at which time they can no longer be acquired.

After placing a basic tile, the player then must take any tile that is face up below the Real Estate Market (paying only the cost shown above that tile on the Real Estate Market, if any) and discard it onto a discard pile.

Toni takes and places a Suburb ☱ on her turn. She then has to decide which tile to discard from the Real Estate Market. She can remove the Freeway ☱ or the Fast Food Restaurant ☱ for free, but she doesn’t want Gage, who is to her left, to get the Homeowner’s Association ☱, so she pays \$2 to the supply to discard the Homeowner’s Association ☱.

### Taking a tile to use as a lake

When taking a tile to use as a lake ☱, the player must choose a tile from the Real Estate Market. He only pays the cost printed on the Real Estate Market, he does *not* pay the cost on the tile. The player places this tile face down adjacent to one or more of his tiles (which may be face up or face down) and receives \$2 per adjacent ☱, ☱, ☱, or ☱ for doing so. If the player places another ☱, ☱, or ☱ next to a ☱, he takes \$2 from the supply. When the player places another ☱ adjacent to an existing ☱, he does not take \$2 for adjacency to the other ☱ tile(s).

### Placing an Investment Marker

An Investment Marker may be placed on any of the player’s tiles—including a ☱—that does not already have an Investment Marker on it.

If the player opts to do this (instead of taking and placing a tile), he pays the cost of that tile again and places that Investment Marker on the left corner (covering the tile’s price) of that tile. An Investment Marker doubles the effects of the tile it is placed on. For instance, an Investment Marker placed on a Community Park ☱ results in +1, and +1 for each adjacent ☱ or ☱ or ☱. When a player places an Investment Marker he does not place a tile. Placing an Investment Marker does *not* impact other tiles’ conditional effects (i.e., placing an Investment Marker on a Community Park ☱ that is adjacent to a Heavy Factory ☱ does not trigger the +1 of the Heavy Factory ☱ again).

Gage wants to place an Investment Marker on a tile. His three best options are placing it on (a) the ‘A’ Lake tile ☱, which costs \$0 and gives Gage \$10 (\$2 for each of the 5 adjacent tiles), (b) the Parking Lot ☱, which costs \$12 and allows Gage to move his Income Cylinder 3 spaces to the right (+1 for the Parking Lot ☱ itself, +1 for the adjacent Community Park ☱, and +1 for the adjacent Office Building ☱), or (c) the Community Park ☱, which costs \$4 and reduces Gage’s income by -1 but also allows Gage to move his Reputation Cube 3 spaces to the right (+1 for the adjacent Suburb ☱, a green tile, +1 for the adjacent Heavy Factory ☱, a yellow tile, and +1 for the adjacent Parking Lot ☱, a blue tile).

An Investment Marker’s effects are in place for the rest of the game, so for the example above, if another ☱ or ☱ or ☱ is placed adjacent to the Community Park ☱ when an Investment Marker is already on it, the player will receive +1 twice, for a total of +2.

After placing an Investment Marker, the player then must take any tile that is face up below the Real Estate Market (paying only the cost shown above that tile on the Real Estate Market, if any) and discard it onto a discard pile.

### COLLECT OR PAY MONEY (BASED ON INCOME)

If the player’s Income Cylinder is on a positive number, the player collects that amount of money from the supply. If his Income Cylinder is on a negative number, the player owes money and must pay that amount immediately to the supply. If he does not have enough money, he pays what he has and then moves his Population Square backwards one space per \$1 to cover the difference. A player cannot have a Population less than 0, so if he cannot move his Population Square back any more and still owes money, nothing happens.

### ADJUST POPULATION (BASED ON REPUTATION)

Increase or decrease your Population on the Population Board by the amount where your Reputation Cube is located. If Population gets to 0, any additional movements backwards cost \$1 per Population. If the player cannot pay this fee, nothing happens to the player...he just stays on the 0 spot.

As your borough grows, it will cost more to maintain and its “small town” quality will decrease—this is represented by Red Lines on the population track. When a player’s Population crosses a Red Line, then that player’s Income ○ and Reputation ■ are both reduced by 1 (moved to the left one space) for every Red Line the player moves past. If a player’s Population dips below a Red Line (this can happen if he has a negative Reputation) he moves both his Income Cylinder and his Reputation Cube forward (moved to the right one space).

When you place a tile, sometimes there will be multiple adjustments to make. When adjusting population past a Red Line, immediately decrease your Income ○ and Reputation ■ by one space, even if you haven’t finished with all the other adjustments yet.

If a decrease to Income or Reputation would cause either or both to be less than -5, the Income Cylinder or Reputation Cube stays at -5.

## ADJUST THE REAL ESTATE MARKET

Slide the remaining tiles on the Real Estate Market to the right to fill in the gap from the removed tile (there will *always* be a tile removed on each player's turn), and flip over a new tile from the current stack (starting with Stack A), placing it at the far left of the Real Estate Market. When Stack A is depleted, flip tiles from Stack B; when Stack B is depleted, flip tiles from Stack C.

## GAME END

When the *1 More Round* tile is flipped over, the current round is completed, and then one more full round is played, starting with the Start Player (after the current round is completed). Everyone should end up having taken the same number of turns in the game.

## FINAL SCORING

After the last player finishes his turn, final scoring takes place. There are two parts to final scoring: Goals and Converting Money to Population. Award goals *before* converting money to Population.

### Red Lines are Ignored During Final Scoring

Population bonuses for accomplished Goals and converting money to population at the end of the game do *not* trigger the Income (O) and Reputation (■) lowering effect of the Red Lines.

### Award Goals

The Population bonus from each of the goals placed on the Real Estate Market are awarded to a single player who achieves those goals. If two or more players tie for achieving a goal, no one is awarded that goal's Population bonus.

Then, in turn order, each of the players' secret goals are revealed, and if a player has singularly achieved his secret goal (and *not* tied another player for that goal), he is awarded that goal's Population bonus. Only the owner of a secret goal tile is able to receive the Population bonus for achieving his secret goal.

### Convert Money to Population

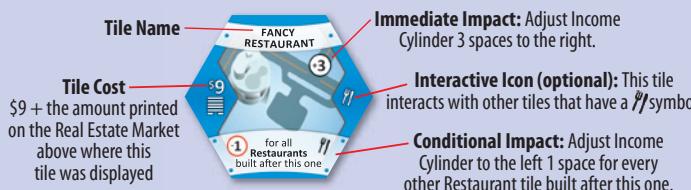

Each player's money is converted: 1 Population + \$1 for every \$5 put in the supply from the player, rounded down (the player keeps any leftover money to be used as a 3rd-level tiebreaker).

## WINNING THE GAME

The player with the highest Population (P) on the Population Board wins. In case of a tie, the player with the highest Reputation (■) among the tied players wins. In case of another tie, the player with the highest Income (O) among the tied players wins. If players are *still* tied, the player with the most remaining money wins. In case of a further tie (at which point the tied players are probably incredibly amused), the tied players play another game of *Suburbia* to determine the winner of the first game.

## TILES

Each tile that you place impacts your city in some way. Tiles fall into one of four categories: Residential (H), Industrial (F), Commercial (C) and Civic (G). Most tiles give bonuses or penalties to Income (O), Reputation (■) or Population (P), while others give you special abilities. Each tile has four or five main elements, as shown in the example below:

Tiles must always be placed so that at least one edge is adjacent to another tile (face up or face down). Tiles can be placed so that they go around (but not rest on top of) the Borough Board.

### Interactive Icon Tiles

Some tiles are impacted by tiles with a specific icon on the right corner of those tiles. These are interactive icon tiles. For instance, the *Business Supply Store* (B) income increases by (1) for every tile with an office icon (a little briefcase) on it, including the Office Building (O), Office of Bureaucracy (B), and the Local EPA Office (E).

## TILE TERMINOLOGY

A slash (/) between different tiles means that effect applies to any of the tiles listed. The following lists a few other common terms that appear on tiles, and how they work:

### "All other boroughs"

This refers to tiles in every borough *not* including your own.

### "Each adjacent"

Tiles with "Each Adjacent" on them require you to count the number of tiles that are directly next to the tile, where one straight edge of the tile is butted up against another straight edge of another tile.

### "Each of your"

This refers to tiles that you have placed in *your* borough only (and in some cases even the tile itself if it is the type specified). For instance, a High School (S) provides its owner with +\$1 for every (H) in the owner's Borough.

### "Every"

This refers to all tiles in all boroughs, including your own borough and including the tile itself (if it fits the criteria).

### (Take) \$2

For all tiles where you take money from the supply, you take that money both when you place that tile as well as when designated tiles are placed *after* you have placed that "Take" tile. For instance, if you place the Homeowner's Association (H) tile on the very first turn of a 4 player game, you'll pay \$6 for the tile to place it, and then instantly take \$10 back from the bank (because there are 4 Suburbs (H) and 1 Homeowners Association (H) tile in the game, for a total of 5 (H), and you take \$2 for each (H)). From that point on, when anyone places a (H) (including yourself), you take \$2.

## TILE EFFECT RESOLUTION ORDER

To resolve the effects of tiles when they're played, always use the following order:

1. Pay the cost of the tile shown on the left corner of the tile (and any additional cost shown on the Real Estate Market).
2. Adjust according to the immediate effect in the upper right of the tile.
3. Adjust according to the conditional effect at the bottom of the tile.
4. Adjust according to the conditional effects of any adjacent tiles.
5. Adjust according to the conditional effects of any non-adjacent tiles.
6. Check with other players to see if any of their tiles will cause you to make adjustments.
7. Check with other players to see if their boroughs are impacted by the tile you've played.

Tile effects can stack, and players may have more than one of the same named tile. For instance, it is okay to have two *Fast Food Restaurants* in a single borough.

## STRATEGY TIPS

- Focus on raising your income early in the game...a (1) in the first turn is worth anywhere from \$15-\$18 by the end of the game!
- Be careful not to get too much population too fast, as you'll start to run into Red Lines faster and slow down your progress before you have a chance to build up a solid Income (O) and Reputation (■) infrastructure of tiles.
- Keep both the public Goals and your private Goal in mind at all times; these are worth a lot at the end of the game.
- Review the Tile List so you know what tiles might show up in each Stack.
- When discarding a tile, look at what your opponents (particularly the player to your left) might need...it might be worth some extra money to get rid of a tile that's perfect for him!
- Always pay attention to where your Population Square is relative to the Red Lines. Sometimes a single extra point can be costly in the long run.
- Income (O) and Reputation (■) increases (or decreases) change in value during the game. The approximate number of turns left in the game (each game has about 15-18 turns in total) is the value when the tile is placed, so early game increases are worth a lot more than late game increases.

# SOLO GAME 1: THE LONE ARCHITECT

All the challenge of the multiplayer game in less than 30 minutes! Gameplay is just like the 2 player game, but you'll only need one Borough Board.

## Set-up

Use the 2-player tile stacks setup, but don't place or distribute any goals.

## Your Turn

Moving past a Red Line results in **②** and **②**.

After your turn is over, you must remove an additional tile, using the same rules as if you had placed an Investment Marker or a basic tile.

# SOLO GAME 2: DALE THE BOT

In this solo game, you'll be playing against Dale, the bot, who has no emotions; he'll always play with you, because he has no other friends! You go first each round (Dale doesn't mind).

## Solo Game 2 Set-up changes

**1**

Shuffle 3 stacks of face down tiles, each stack with a letter on the back (A, B, and C). Each stack has 25 tiles. Place unused tiles back in the box.

**2**

Mix the 1 More Round tile  with 12 tiles from the C stack, and place those tiles face down on the bottom of the C stack.

**3** Set-up is the same as regular setup with the following exceptions:

Shuffle the goals face down and place 3 random goals face up on the goal spaces on the Real Estate Market. If you reveal a goal with a lake or Investment Marker, discard it and replace it with another tile.

**4** Place the top 4 tiles from the A stack face up along the bottom edge of the Real Estate Market under the \$6, \$4, \$2 and \$0 spaces.

## Your Turn

Take a normal turn, following the normal rules. The three tiles not bought are left in the Real Estate Market (do not move them).

## Dale's Turn

Dale isn't too smart, but he has some advantages. He plays by the following rules:

Each turn, Dale buys the most expensive tile available (based on the tile price plus Real Estate Market adjustment), but he only pays \$3 for it. In the case of two or more tiles with the same costs, he buys the leftmost one.

Dale never buys a basic tile, and Dale never creates a lake. Furthermore, Dale never plays an Investment Marker.

The Purchased tile is placed in the best spot possible (after taking into account all tile interactions), using the following rule:

Increase the most Reputation and Income when both are added together (ties favor Reputation).

As long as the placement rule above is followed, the tile can be placed on any valid space.

After Dale buys a tile, places it, and adjusts his Income and Reputation, the two tiles remaining in the Real Estate Market are discarded from the game.

## Next Round

4 new tiles are placed in the Real Estate Market on \$6, \$4, \$2 and the (leftmost) \$0 spaces.

## Game End

When the 1 More Round tile appears, the game ends immediately (you do *not* take another turn, but instead go directly to goal scoring and Population-for-money scoring).

## Scoring for Both Solo Games:

<60: Junior Intern    60-75: Subcontractor    76-90: Draftsman    91-105: Architectural Designer  
106-120: Architectural Engineer    121-135: Principal Architect    >135: CEO of Suburbia, Inc.

## Miscellaneous Notes

The Borough Boards can be flipped over; the ones pictured in the rules are from the top down, which is more thematic (building the suburbs out from the main city). However, due to table space restrictions or personal preference, you may want to flip them over and play with the Borough Boards at the bottom. In that case, the starting tiles are positioned the same way: Suburbs in the center space, with Community Park above Suburbs, and Heavy Factory at the top above Community Park. Different players within the same game may play different orientations of Borough Boards; this has no effect on gameplay.

The stickers in the box should be applied to the (large) Start Player Marker's front and back.

The blank A, B, and C tiles are for replacing damaged tiles, and should not be used in the game.

## Special Thanks

To Hans im Glück for graciously allowing the use of the Carcassonne-style meeple.

To Kevin Wilson for pushing me to include goals in the game.

To Dale Yu for his tireless efforts to continue to iterate and improve upon the gameplay.

To Hanno Girke and Klemens Franz at Lookout for making Suburbia look much much better than it did before their involvement.

To all the playtesters, many of which are listed below:

Carol Alspach, Dakota Alspach, Gage Alspach, Toni Alspach, William Attia, Kent Bunn, Eric Burgess, Christina Burgess, Bay Chang, David Clunie, Columbus Area Boardgaming Society, Logan Colyer, Shelley Ganschow, Doug Garrett, Sandy Dawson, Jack Diddley, Todd Diep, Hank Drew, Dave Eisen, Gathering of Friends Gamers, Marc Gilutin, Hanno Girke, Gulf Games Gamers, Fil de Guzman, Brett Hardin, Lucas Hedgren, Mike Heller, Ken Hill, Robyn Hill, Mark Jackson, Chris Johnson, Ethan Johnson, Evan Johnson, Tina Johnson, Jeremiah Lee, Josh Lubiner, W. Eric Martin, James Miller, Karen Miller, John Palagy, Valerie Putman, William Rennard, Steve Samson, Greg Schloesser, Joe Schmo, Dame Shuffles-a-lot, Sir Shuffles-a-lot, Bob Skokes, Adam Smiles, Jim Tripplett, Julien Van Reeth, Candace Weber, Chad West, Kevin Wilson, Karen Woodmansee, Ryan Yu, Christopher Yu, and Ian Zernechel.

## Artwork & Graphic Design by Klemens Franz

Klemens Franz - born 1979 - attended an art collage in Graz. After his Studies he worked as an assistant for new media. Since 2006 he's illustrating board- and card-games for various publishers. He's married, has four children (with the most recent delivered in a McDonalds parking lot in the middle of Suburbia development), three cats and lives in the Styrian volcanic region in the south-east of Austria close to the Hungarian and Slovenian border.

## Building Tile Artwork by Ollin Timm

Originally from Portland Oregon, Ollin Timm works as a freelance artist while pursuing a degree in architecture at the University of Oregon. He has long been interested in gaming and graphical presentation—this is his first official boardgame work to date.

## Game Development & Bot Rules by Dale Yu

Dale has been involved with game development since 2001. Previous projects include being part of the development team for Dominion as well as refining the solo game for Agricola. He also has helped design two expansions for Agricola: the X-deck and the Legen\*Dairy Forest Deck. Since 2010, he has served as the editor-in-chief for the Opinionated Gamers.

## Game Design by Ted Alspach

Ted is the designer of more than 40 games and game expansions, including *Mutant Meeples*, *Ultimate Werewolf*, *TieBreaker*, *Ticked Off*, *Perpetual-Motion Machine*, *Beer & Pretzels*, *Start Player* and many more. He's also the author of more than 35 books, including the award winning *Board 2 Pieces: Of Dice & Meeples* and *Board 2 Pieces: Something Smells Gamey*. Ted lives in the sprawling *Burg von Alspach* located in San Jose, California, with his wife, son, daughter, dog, cat and 2 kittens, each of which have knocked *Suburbia* playtest pieces onto the floor at various times during its development.

Suburbia is ©2012 Ted Alspach and Bézier\* Games, all rights reserved.

**béziergames**  
[www.beziergames.com](http://www.beziergames.com)

\*Bézier is pronounced "BEZ-ee-ay" because it's a French word that I've Americanized.
